EAM Solutions

Case Study:

Moving to the Octave Cloud

Bentley University is a century old, leading business school in the US, and a long time Attune EAM user. The University is looking for better ways to use their technology team, instead of maintaining and upgrading local servers. In recent years, they have been moving their enterprise systems to the Cloud, and **it was time for EAM to move to the Octave Cloud** in AWS. To make this move, the Bentley University team turned to the experts at EAM Solutions.

Attune EAM (formerly HxGN EAM) helps the University maintain facilities equipment in support of students, faculty, and staff. The application is also integrated with their Enterprise Resource Planning (ERP) system. The technology team faced challenges in moving direct database connections to the Cloud using standard EAM tools – all while keeping maintenance services going for campus maintenance services.

Senior Director of Enterprise Services Jay Wells said they relied on the expert consultants at EAM Solutions to guide them through this process, as well as help them rebuild and test their system integration points.

> **"EAM Solutions was just the partner we needed for this complex project. Their team of experienced staff supported us throughout the project with their deep knowledge of EAM, creative problem-solving and technical expertise."**
>
> *Jay Wells, Bentley University*

The consultants at EAM Solutions helped the University team convert their database, test reports, and recreate system integrations using EAM REST APIs. Consultants became part of their project team and even helped transfer technical knowledge to the University IT staff at the end of the project. **Now with this success**, the Bentley University team can more effectively manage facilities, staff, faculty and student needs without worrying about their technical infrastructure.

Octave is a leading provider of asset management systems, including Attune EAM, a world-class EAMS.

EAM Solutions is a professional services group dedicated to implementation of the Octave line of enterprise asset management products, including Attune EAM, MP2, and legacy versions of these systems, as well as all add-on products. The company is headquartered in Birmingham, AL and serves clients worldwide. Our technical and business consultants have been certified by Hexagon to implement and support Attune EAM and add-on applications. With more than twenty years of experience with asset management software, EAM Solutions is a recognized leader in the EAM industry.
